Bank / Program Admin — PRD Index

Product Area: Bank / Program Admin
Version: v1.0 · May 2026
Status: Draft

Overview

This document set defines the Product Requirements for the **Bank / Program Admin view** of the ACTC Consumer Credit Card platform. Each flow PRD covers a discrete operational area of the admin console used by program managers (banks, credit unions, fintechs) to configure their card programs and service their cardholders.

The PRDs integrate:

- The **MVP Feature List** (Admin and End-Client capabilities and their dependency matrix)
- The **Payment Rules & Logic** document (authoritative payment behavior contract)
- The **Autopay Rules & Overrides** document (authoritative autopay behavior contract)
- The **ACTC Credit Card UX & Product Logic Audit** (March 2026) — compliance and UX findings that drive specific requirements, cross-referenced inline

Flow Index

#	Flow	Summary
1	Card Program Configuration	Define card product metadata, terms (APR, fees, rewards), billing cycle, activation, autopay options

#	Flow	Summary
2	<u>Cardholder Account Management</u>	Create, view, lifecycle-manage individual cardholder accounts; credit limits; card-level actions; adverse action handling
3	<u>Dispute Management</u>	Receive and resolve cardholder disputes within FCBA windows; provisional credits; network representment
4	<u>Autopay Policy & Management</u>	Program-level autopay policy, enrollment visibility, execution monitoring, admin overrides
5	<u>Transaction Monitoring</u>	Real-time feed, decline metadata, fraud alerts, pre-auth holds, subscription detection
6	<u>Statement & Billing Management</u>	Statement generation, regeneration, payment posting, reversals, adjustments, billing summaries
7	<u>Spend Controls</u>	MCC / geographic / limit / velocity / cash advance rules at program, account, card levels

Cross-Flow Themes

Compliance Threads

- **Reg Z / CARD Act** disclosures originate in Flow 1 (Schumer Box) and propagate through Flows 2 (account opening) and 6 (statement disclosures, minimum payment warning).
- **FCBA** dispute timelines and process governed by Flow 3, with the underlying transaction window enforcement coming from Flow 5.
- **ECOA / Reg B** adverse action handling lives in Flow 2 (declined application state).
- **Reg E** payment confirmation rules govern Flow 4 (autopay) and Flow 6 (payment posting visibility).

Data-Source Hierarchy

- **Flow 1** is the upstream source of truth for terms, cycles, and policy.
- **Flow 2** is the account-level record.
- **Flows 3, 4, 5, 6, 7** all reference Flow 1 and Flow 2 contexts and produce events that feed each other.

Cardholder-Facing Dependencies

Every admin flow has corresponding cardholder-facing surfaces. The admin-side is the source of truth; the cardholder side is a faithful display. The MVP Feature List Section C (Admin ↔ End-Client Feature Dependency Matrix) captures the full mapping.

UX Audit Integration

The March 2026 UX audit identified 26 findings spanning compliance, logic, and missing states. Each PRD calls out the specific audit findings it addresses, in particular:

- Finding #3, #9, #10 — Autopay clarity and freeze state differentiation (Flows 2, 4)
- Finding #5, #6, #7 — Dispute eligibility and status tracking (Flow 3)
- Finding #12, #13, #14 — Statement validation, accessibility, and CARD Act warning (Flow 6)
- Finding #17 — Reward type unification (Flow 1)
- Finding #19 — Adverse action notice (Flow 2)

Out of Scope for MVP

These items are referenced in the source documents but explicitly deferred:

- Authorized users / supplemental cards
- Joint accounts
- Non-monthly billing cycles
- Same-day ACH (per-program issuer decision)

- Cardholder-self-service spend controls and travel notices
 - Auto-retry on payment failures (deliberately excluded as a product principle)
 - Bulk admin operations beyond CSV export
 - Year-end tax-style aggregations
-

Open Questions (Cross-Flow)

- Role / permission model: how granular for MVP? (Dual-control thresholds in Flows 2 and 6 imply at least: **Admin, Servicing Agent, Supervisor, Compliance.**)
- Change-in-terms notification orchestration: lives in which system?
- Notification channel preferences: managed in Flow 2 cardholder profile? (Assumed yes.)
- Compliance reviewer as separate role vs. self-attestation with audit: TBD.
